

# 14-848 Cloud Infrastructure

FALL 2025

MOHAMED FARAG

[FARAG@CMU.EDU](mailto:FARAG@CMU.EDU)

# Agenda

---

- Welcome and Introductions
- Focus Areas of this Course
- Course Syllabus & Schedule
- Class Expectations
- Introduction to the Cloud
- Next Steps

## Important Course Aspects

---

- Relevant course topics to today's market and research
- Practical course: 30% theory + 70% practice
- Course focuses on Cloud Infrastructure (compared to development)
- Assignments are implemented on public cloud environment
  - Google Cloud is our main cloud environment
- Extra-credit opportunities to build your private cloud environment
- Three practical project options to choose from.
- **Note:** Don't take this course if you took 15319/15619/15719.

# Cloud Infrastructure in Today's Market

---

In recent years, the demand for Cloud Computing and Infrastructure jumped significantly.

- The [US Bureau of Labor Statistics \(BLS\)](#) forecasts that cloud computing employment opportunities will grow by 15% between 2021 and 2031. This growth rate is considered faster than the average for other occupations.
- “The global cloud computing market size is projected to grow from \$677.95 billion in 2023 to \$2,432.87 billion by 2030”, [Fortune Business Insights](#).
- [Indeed.com](#) lists Cloud Computing as the #1 skillset to learn in 2024.
- [Skillsoft](#) lists Infrastructure as a Code as the #2 skillset to learn in 2023
- [The most in-demand hard skills of 2023](#) lists Cloud Computing among the top 10 hard skills.

# Focus Areas of this Course

## Cloud-related Technologies

### Cloud Providers:

- Google Cloud Platform

### Big Data Processing Platforms:

- Apache Hadoop
- Apache Spark

### NoSQL Database:

- Neo4j
- BigTable

### Large Language Models:

- Google AI Studio

## DevOps

### Deployment Scaling and Orchestration:

- Docker
- Kubernetes

### DevSecOps

- Falco

### Cloud Infrastructure

- Infrastructure-as-Code
  - Terraform

- Kafka

- Metaverse

- Data Centers

- Edge Computing & Fog Computing

## Expectations for Incoming Students

---

- *You are expected to know Python or are willing to learn it.*
  - A Python recording is released week for members who need support with Python
- *You are expected to have a basic understanding of Computer Virtualization.*
  - If you don't know about virtualization, check out this reading: <https://www.vembu.com/blog/physical-server-vs-virtual-machine-choice-open/>

# Instructor and TA Introductions

## Instructor:

- Mohamed Farag: [farag@cmu.edu](mailto:farag@cmu.edu)

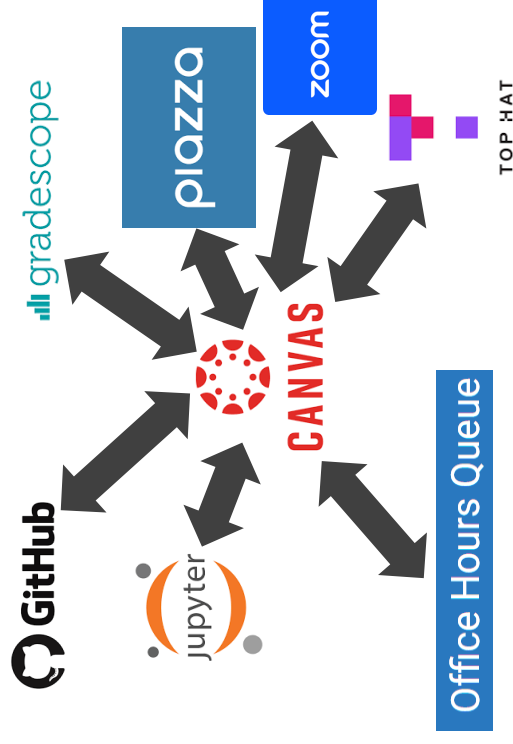

## TAs:

- Ajay Sunandan [asunanda@andrew.cmu.edu](mailto:asunanda@andrew.cmu.edu)
- Fraol Dechasa [fdechasa@andrew.cmu.edu](mailto:fdechasa@andrew.cmu.edu)

## Course Delivery Technology Stack

---

## Course Logistics

---

- Lectures recordings are made available after the lecture end time.
- You may ask questions interactively or via TopHat during the lecture. Sign up for a free TopHat account and join the course with the following code: **573533**
- Use the Student Space Slack Channel to find a teammate for your course project (No instructor or TA help is offered there)
- Students who have approved accommodation shall contact the course instructor to figure out how the instructor can meet their needs.
- You may contact the student affairs if you must miss a few classes due to illness.

# Course Logistics – Office Hours (Zoom/In-Person)

In-person/Zoom OHs						
Days/Times	11am-12pm ET	12:00-1:00pm ET	1-2pm ET	2-3pm ET	4-5pm ET	9-10pm ET
Monday		Mohamed		Fraol		
Tuesday						
Wednesday			Ajay	Ajay		
Thursday		Fraol		Ajay	Mohamed	
Friday			Ajay	Fraol		
Instructor Office Hours - Conducted remotely via Zoom - URL can be found on Canvas						
TA Office Hours - Conducted remotely via Zoom - URL can be found on Canvas						
PT In-Person OHs. Location: CIC Building, Room: 1301						
SV In-Person OHs. Room: 208						

- Instructor Office Hours will use this Zoom URL:
  - <https://cmu.zoom.us/j/92231657955?pwd=mNyb0fCSLo1EZwcajFcLugNwiV6dBc.1>
- TA Office Hours will use this Zoom URL:
  - <https://cmu.zoom.us/j/92004227250?pwd=YnpiTW1qSXdsWVYzd2t0e1ptQT09>
  - In-person OHs won't have Zoom.

# Course Logistics – Piazza Hours

Piazza OHs				
	10-11am ET	3-4pm ET	9-10pm ET	11pm-12am ET
Monday				
Tuesday		Fraol		Ajay
Wednesday				Ajay
Thursday	Ajay		Ajay	Fraol
Friday		Fraol		
Saturday		Fraol		

- Use Course Piazza to ask asynchronous questions that require instructor and/or TA help
- Please note that TAs will respond to inquiries/questions made **\*before\*** the Piazza OHs start time. Questions and inquiries that are made during the OHs time slot are not guaranteed to be answered during the same time slot.

## Office Hours Etiquette Reminder

- Sign-up for a spot in the OH Queue: <https://ohq.eberly.cmu.edu/#/courses> and search for “14-863”
- Office Hours aim to help you find the path to maximize your learning experience.
- Getting the answers from the TA directly won't help you learn so **there won't be direct solutions provided during Office Hours**.
- The goal of the office hours is to **give you some ideas and pointers for you** to debug the issues.
- Please don't plan to spend **more than 15 minutes** in your conversation with the TA.
- Ask **good questions with due diligence**. Please research the issue and put an effort in implementing it before coming to Office hours.
  - **Example of a bad question:** I found this draft code online and I'm citing it but can't get it to work. Can you help?
  - **Example of a good question:** I'm getting a bug in my deployment to the cloud, I researched the issue and found these 3 different references (share the URLs). I implemented the first one and it didn't work. I'm trying the second one now and getting an error that I can't find enough references to it online. What could be the root cause of it?

# Course Assessment

Final Exam	Project	Assignments	Quizzes
15%	20%	40%	25%

You can boost your final exam score with up to 4 bonus points

Your lowest two quiz scores are dropped at the end of the semester

## Course Assessment – Final Exam on December 3rd during the lecture

Final Exam	Project	Assignments	Quizzes
15%	20%	40%	25%

**Final Exam:** is an open-note test.

- Students will have access to all the **PDFs** for lectures, readings and HW solutions. Students can bring any hard-copied materials with them.
- Students are required to follow the schedule of their registered section. **On the scheduled final lecture of each section, final exam will be released only to the registered students of the corresponding section.** Each section will have its final exam version(s).
- Exam will be offered via **Lockdown Browser** and no knowledge exchange is allowed among students during the exam.
- Students are expected to install and test Lockdown browser on their machines ahead of the exam. If students face an issue with Lockdown browser installation, students must reach out to the instructors no later than 2 weeks before the final exam date.
- **Sharing hard-copied notes is prohibited during the exam.**

# Course Assessment – Cont'd – Final Exam Booster

Final Exam	Project	Assignments	Quizzes
15%	20%	40%	25%

You can get four bonus points on the final exam if you obtain TWO of the following certifications two weeks before the final exam

- Google Cloud: Associate Cloud Engineer
- AWS Certified Solutions Architect – Associate
- Microsoft Certified: Azure Developer Associate
- GCP Professional Data Engineer
- AWS Certified Data Engineer - Associate
- Microsoft Azure Data Engineer Associate
- Certified Kubernetes Application Developer
- NVIDIA's Fundamentals of Accelerated Data Science

Late submissions are not accepted.

Obtaining only 1 certificate will gain you two bonus points on the final exam score

## Course Assessment – Cont'd

Final Exam	Project	Assignments	Quizzes
15%	20%	40%	25%

- **Homework Assignments:** there will be 7 homework assignments provided throughout the semester covering the practical aspects of the class. There will be good learning curve that students will have to take on their own.
- Students will have 3 days to submit the assignment after the due date with a late penalty. Late penalties are applied based on the timestamp of the last code commit on GitHub and it will follow this equation (no matter whether the delay is in minutes or in hours):
  - Total of 5 points for up to 24 hours delay
  - Total of 15 points for the next 24 hours delay
  - Total of 25 points for the next 24 hours delay
  - 100 points penalty (no grade) after this time.

After homework grades are released, **regrade requests can be made for 24 hours via Gradescope and CANNOT be submitted via email.**

## Course Assessment – Cont'd

Final Exam	Project	Assignments	Quizzes
15%	20%	40%	25%

- **Course Project:** Each student will have the option to peer with a team member for the project and you will choose one of three project options to submit. This project leverages most of the topics and practices that are covered throughout the semester. Course details are released in Week-3. Project submission deadline is **November 13<sup>th</sup>, 2025 11:59PM ET /8:59pm PT**.
- **Quizzes:** there will be 1 quiz published on Canvas during the lecture with a specific access code. The access code will be revealed during the lecture to the registered students of the corresponding section.
  - Quizzes will start from the second week of classes.
  - **Students will receive two excused absences for lectures (and their quizzes) for emergencies, sickness, etc.**
  - If you need to attend remotely for extended time period, please refer to the course homepage on Canvas.

# Course Grade Scheme

Grade	Percentage Interval
A/A-	[85-100%], A starts from 93
B	[70-85%)
C	[55-70%)
D	[40-55%)
R (F)	Below 40%

+/- are used to provide granularity in equal intervals in B and C ranges

# Course Schedule

Date	Topic	Notes
<b>Week-1</b> (Aug. 25 <sup>th</sup> )	- Introduction & Syllabus - Virtualization Basics	- System Setup homework released
<b>Week-2</b> (Sep. 1 <sup>st</sup> )	- Containerization	- System Setup homework deadline. - Docker homework released
<b>Week-3</b> (Sep. 8 <sup>th</sup> )	- Lab: Containerization - Deployment Orchestration - Pokémon Go Case Study	- Course Project released - Kubernetes homework is released
<b>Week-4</b> (Sep. 15 <sup>th</sup> )	- Lab: Deployment Orchestration - Kafka	- Docker homework deadline
<b>Week-5</b> (Sep. 22 <sup>nd</sup> )	- Lab: Confluent Kafka - Infrastructure-as-a-Code	- Kubernetes homework deadline - Kafka Homework released
<b>Week-6</b> (Sep. 29 <sup>th</sup> )	- Infrastructure-as-a-Code (Cont'd) Terraform - Lab: Terraform	
<b>Week-7</b> (Oct. 6 <sup>th</sup> )	- Cloud Data Storage Models - Lab: NoSQL Database - Neo4j  AuraDB	- Course Project Checkpoint

## Course Schedule – Cont'd

<b>Week-8</b> (Oct. 20 <sup>th</sup> )	- Cloud Infrastructure Concepts - Introduction to Hadoop	- Kafka Homework deadline - Terraform Homework released
<b>Week-9</b> (Oct. 27 <sup>th</sup> )	- Hadoop HDFS - Hadoop MapReduce	- Terraform Homework deadline
<b>Week-10</b> (Nov. 3 <sup>rd</sup> )	- Big Data Algorithms - Introduction to Spark	- Hadoop MapReduce homework released
<b>Week-11</b> (Nov. 10 <sup>th</sup> )	- Spark (Cont'd) - Lab: Spark Programming	- Course project submission deadline
<b>Week-12</b> (Nov. 17 <sup>th</sup> )	- Metaverse, Edge Computing and Fog Computing - Cloud Security & Privacy Concepts	- Hadoop MapReduce homework deadline - Apache Spark homework released
<b>Week-13</b> (Nov. 24 <sup>th</sup> )	- DevSecOps	- Apache Spark homework deadline
<b>Week-14</b> (Dec. 1 <sup>st</sup> )	- Introduction to GenAI on the Cloud using Vertex AI - Final Exam	

## Expectations down the Road!

---

- For the final exam, we will use the Lockdown browser, and you will have access to the lecture PDFs via the browser. You will receive few training attempts on the final exam environment before the exam date.
- You are welcome to use other cloud platforms like Azure and AWS. That said, we don't have any credits/support that we can offer for these systems. You may need to use a Free Trial version.

## HW Submission Guidelines

- HW-1 focuses on Environment Setup and GitHub Skills. It's released on Canvas, and you can submit it with no penalty until Thursday **September 4<sup>th</sup>, 11:59PM ET**.
- HW-1 submission:  
  
A person icon is shown submitting a PDF file (indicated by a red box around the Adobe PDF icon) to Gradescope (indicated by an arrow pointing to the Gradescope logo).
- HW-2 and later assignment submissions:  
  
A person icon is shown submitting a GitHub repository (indicated by an arrow pointing to the GitHub logo) to Gradescope (indicated by an arrow pointing to the Gradescope logo). The arrow from GitHub to Gradescope is labeled "URL".

## Academic Integrity Violations (AIVs)

---

- AIVs are serious and can have direct impact on your course grade, your scholarship -if any-, your graduation timeline, and/or your continuation in your degree program.
- Simple rules to follow:
  - Cite all the references you are using. Use APA citation style.
  - Cite ChatGPT (or other AI tools) for any code/info used in your answers.
  - Don't use more than 30% of your solution/answer from external sources.
  - Collaborate and share ideas with your peers, and not code.
  - Don't share code with your peers (including in-class group exercises).  
Don't use your peer's code even after changing variable names or statement order.
  - Don't share quiz access codes with your peers.

## Other Syllabus Information

- **If you run out of Google Cloud credits, plan for 24-48-hour delay to get a new coupon.**
- Syllabus contains important information about student wellness, student academic success center, and food insecurity.
- The Syllabus can be found on Canvas under the Modules section

# Waitlisted?

For enrollment questions and inquiries, please email  
the INI Academics at [ini-academic@andrew.cmu.edu](mailto:ini-academic@andrew.cmu.edu)

# Now, let's start! What is the Cloud?

# What is the Cloud?

- It's a cluster!
- It's a supercomputer!
- It's a datastore!
- It's superman!
- None of the above?
- All of the above?
- In simple words:
  - **Cloud = Lots of storage + compute cycles nearby + network bandwidth**

## The cloud in the industry!

---

“Cloud” refers to large Internet services running on 10,000s of machines (Amazon, Google, Microsoft, etc.)

There services are offered to external customers for cycle renting and storage

- Amazon EC2: virtual machines at 8.5¢/hour
- Amazon S3: storage at 21¢/GB/month
- Google Cloud AppEngine
- Windows Azure

# Scientifically, what is the Cloud?

Cloud is a model that offers the following characteristics:

	<b>On-demand self-service</b>	No human intervention needed to get resources
	<b>Broad network access</b>	Access from anywhere
	<b>Resource pooling</b>	Provider shares resources to customers
	<b>Rapid elasticity</b>	Get more resources quickly as needed
	<b>Measured service</b>	Pay only for what you consume

# Why Do We Care about Cloud Infrastructure?

---

Accessibility

Big Data

Cost

# Cost Savings in Cloud

Consider the following scenarios for resource deployment:

- A. Modest Deployment
- B. Tiny Deployment
- C. Enterprise
- D. Very Large Enterprise

Scenario	A	B	C	D
Small VM	20	4	200	500
Medium VM	40	10	750	1750
Large VM	10	2	150	750
Storage (TB)	10.9	2.5	171.9	468.8

# Cloud costs vs. Traditional IT costs in Tiny Deployments

Aspect	Traditional IT Costs	Cloud-Based Server Costs
Initial Setup Costs	High, includes hardware, software, and infrastructure setup	Low to moderate, primarily subscription-based or pay-as-you-go
Maintenance and upgrades	High, ongoing costs for hardware maintenance and software upgrades	Low, handled by cloud service providers
Scalability	Limited, requires significant investment for expansion	High, easily scalable based on demand
Operational flexibility	Low, fixed resources and limited flexibility	High resources can be adjusted as needed
Disaster recovery	High, requires investment in backup infrastructure	Low to moderate, often included in cloud services
Energy and cooling costs	High, significant energy consumption and cooling requirements	Low, managed by cloud providers
Staffing requirements	High need for IT staff to manage and maintain systems	Low, reduced need for in-house IT staff
Downtime costs	Potentially high, dependent on in-house capabilities	Low, high availability and reliability offered by providers
Security costs	High, requires investment in security measures	Variable, often included in cloud service plans
Time to deployment	Long, extensive setup and configuration time	Short, rapid deployment and provisioning of resources

# Examples of Cloud Services

---

- **Dropbox**
- **Google Drive**
- **Microsoft OneDrive**
- **Apple iCloud**

- **Netflix** - hosted on AWS
- **Google search** – Google Cloud
- **Google Docs, Sheets, and Slides**
- **Facebook**

# Company Infrastructure and User Needs With vs. Without Cloud

Which diagram reflects the IT resources and User needs for Infrastructure using the Cloud?  
And Why?

# Conventional Computing Infrastructure vs Cloud Computing Infrastructure

Conventional	Cloud
Manually Provisioned	Self-provisioned
Dedicated Hardware	Shared Hardware
Fixed Capacity	Elastic Capacity
Pay for Capacity	Pay per Use
Capital & Operational Expenses	Operational Expenses
Managed via System administrators	Managed via APIs

# Cloud Computing Service Model

---

## SaaS: Software as a Service

---

- Provided with access to application software in the cloud
  - On-demand software
- Most applications can be run directly from web browser
- Largest cloud market
- **Examples:** Google Apps, Microsoft Office 365, Oracle's Netsuite, SAP's Concur, Cisco WebEx, GoToMeeting

## PaaS: Platform as a Service

---

- Provides computing platforms which typically includes operating system, programming language, execution environment, database, web server, etc. to build cloud applications.
- Applications using PaaS inherit cloud characteristic such as scalability, high-availability, multi-tenancy, SaaS enablement, and more.
- **Examples:** Google App Engine, AWS Elastic Beanstalk, Salesforce.com, Amazon EMR, MS Azure HDInsight, GCP Dataproc

## IaaS: Infrastructure as a Service

---

- Offers storage and computing resources that developers and IT organization use to deliver custom business solutions
- **Examples:** Amazon EC2, VMWare vCloud, GCP Compute Engine

# MaaS: Metal as a Service

- Combines the flexibility and scalability of the cloud with the ability to harness the power of physical servers.
- **Example:** Juju
- For more information, watch this video (optional): [https://www.youtube.com/watch?time\\_continue=2&v=FBCKCO45xIw](https://www.youtube.com/watch?time_continue=2&v=FBCKCO45xIw)

# Cloud Computing Service Model

In MAAS

- 🔴 You will have the option to control everything!

# PaaS or IaaS?

---

**Vendor Lock-in:** the ability to use “what you manage” in cloud environment with different cloud provider.

- PaaS may lock-in applications by requiring users to develop apps based on their specific APIs.
- If you are using PaaS, it might be difficult to switch to different vendor.

## Development Tools

- PaaS providers usually allow a set of development tools for their users to shorten development time.
- Another trick for vendor lock-in!

## Cloud Computing Enablers

---

Data Center + Virtualization  
(Hardware)      (Software)

## Next Steps

---

- Complete Course Entry Survey
  - Link can be found on Canvas under “Modules” section.
- Sign-up for the course on TopHat.
- Join the course Piazza.
- Join the student Slack workspace.
- Familiarize yourself with the location of the in-person OHs
- Check Homework-1 PDF
  - Waitlisted students will receive a Google Form on September 3<sup>rd</sup> to submit their HW-1 solution

## Waitlisted Students

- All materials for first two weeks will be uploaded here
